# **Business NETVIGATOR Roaming**

## **Quick User Guide**

## Step 1. Installing the Roaming Application

Download & install the application from:

#### For Business Broadband Customers:

http://www.biz.netvigator.com/support/ro/BizNet\_Business0607.exe

#### For Dedicated Internet Access Customers:

http://www.biz.netvigator.com/support/ro/BizNet\_ImsBiz0607.exe

## Step 2. Start the Roaming Application

Locate and double-click the application icon from the Windows' desktop

	Updates v Preferences v Help v Streater ' Help v Streater'
New Connection Bookmarks Status	New Connection - Dial Connection Ige: Unit Profession W.F. Mobile Der Enter Your Location : Country:
	Phone Number Phone Number OR State OLcotion Jual Prefix:
	Advanced Save as Bookmark Phone Book Clear Connect Dial String:
s	Status: Security O On-Line O Corporate Network O Messages: New device found

# **Step 3. Select connection type**

Click the **New Connection** tab on the left-hand side menu then select your desire connection type: **56K modem dialup (Dial), Broadband, Wi-Fi, or CDMA (mobile data)**, by clicking on the corresponding icon as circled in the diagram above

In general, using the dialup is the easiest way to get connected as it has the widest coverage.

Note, if the icon is dimmed in grey, it indicates that the corresponding connection type is not available to your PC currently, hence, no appropriate hardware installed or physical LAN cable connected.

## Using Dial Connections:

Tell the Roaming Application which country and city you are in, the application will automatically search and pick up a local dialup number for you to make connection.

	Advanced Save as Bookmark Phone Book Clear Connect Dial String: T4163682622
s	tatus: Security O On-Line O Corporate Network O Messages: New device found

- In the **Country** prompt: select the country where you are in from the dropdown selection box.
- Click the Location radio button

- In the **State/Province** prompt: select the state/province where you are in from the dropdown selection box. Note, depending on the country selected, the State/Provice prompt may or may not appear.
- In the **City** prompt: select the city where you are in from the dropdown selection box.
- In the **Dial Prefix** prompt: select the prefix number used for your connected telephone line to get access to the outside line (if required), e.g. 9,
- Click the **Connect** button

Please jump to step 4 to continue the rest of the connection procedures

# **Using Wi-Fi Connections:**

The Roaming Application will automatically detect any **supported** Wi-Fi signals near by. If there is such available, it will be shown as "**PCCW**" (PCCW's own hotspot) or "**Fiberlink Wireless Premium**" (Other service provider's hotspot) under Available Networks' list. Otherwise, the list will be empty. It is suggested to select the "**PCCW**" one if both signal names appear.

Note, make sure the Wi-Fi of your PC is turned on.

- Select either the "PCCW" (preferred) or "Fiberlink Wireless Premium" signal

- Click the Connect button

Please jump to step 4 to continue the rest of the connection procedures

# **S** Using Broadband Connections:

First check whether the location that you are in is in the Business NETVIGATOR Roaming's supported list of broadband locations. To do so (for US and Canada only), click the **Find a Location** button and select the country, states, and city where you are from the dropdown selection boxes, and click the **Run Search** button. List of the available locations will be shown (if available)

	Bookmark Cate	gory
	Advanced Save as Bookmark Find a L	ocation
s	Status: Security On-Line O Con- Not New Jevice found	rporate O

If the location where you are in is shown in the list:

- Connect your PC to the available network socket with a LAN cable
- Click the **OK** button it will take you back to the connection page
- Select the signal named as New Location 0
- Click the **Connect** button

Please jump to step 4 to continue the rest of the connection procedures

# Using Mobile Data Connections (China CDMA):

The service is ONLY accessible within the CDMA mobile network coverage in China.

Note, make sure the CDMA card is inserted into your PC.

- Click the **Connect** button

### **Step 4. Enter Login Information**

Once the connection type is selected, and clicked the **Connect** button, it will bring you to the login page as shown below:

New			roaming	
Connection	New Connection	- Verificati	on	
Bookmarks	Credentials :			
	Network Login			
Status	User Name :			
		>		
	Password :			
		>		
	Save Username			
		Cancel		onnect
		Cancel		onnect

- Input your **User Name** and **Password** that provided to you. Note, do not need to input the trailing @domain for the User Name, e.g. input **pccwrm50** if you are provided with pccwrm50@biznetvigator.com as the user name.
- Tick the **Save Username** check box if you prefer to have your user name remembered when you login again next time. Note, you still have to input your password again next time when you login as for the security sake

Once the entered user name and password are authenticated successfully, you are connected to the Internet. Note, the Roaming Application will minimize itself and stay in the Window's System Tray

### **Demonstrate Internet connectivity**

Upon the connection established, you are connected to Internet

- Start a web browser, i.e. Microsoft Internet Explorer
- Browse any Internet web site, e.g. <u>www.biz.netvigator.com</u> or <u>www.yahoo.com</u> etc.

### **Disconnect the Internet connection**

- Click the icon in the Window's System Tray to open the Roaming Application
- Click the **Status** tab on the left-hand side menu
- Click the **Disconnect** button

Once it is disconnected, the word "**Disconnected**" will be shown in the Message line at the bottom of the Application

### Selecting Your Language

The roaming application is localized for Japanese, German, French, Simplified Chinese, and Traditional Chinese. You can change the user interface to display in any of these languages.

To display one of these languages in the roaming application:

Go to the **Preferences** menu on the main Roaming Application window

- Click to display the options
- Go to Select Language to display the Language drop down menu
- Move the cursor to the Language menu and click on your language to select it

	usiness st <b>vigator</b> °	Updates	Preference: Connectio	s + Help +	×

Bookmarks		Français 中交(简体)	Resize	Mobile Data	
Status	Available Connec	中交(繁體) Deutsch 中本語	togory		
	New Location		negory		

Text, buttons, menus, and messages will display in your chose language. To return to English or choose another language, go back to the **Language** menu and select the option you wish to view.

## **Getting Help**

If you encountered any problem regarding using the Roaming Application, you can contact our Customer Support center. The center's hotline number can be found from the Help Desk Message under the top Help menu.

### Help Desk Message Business NETVIGATOR Please contact Business NetVigdor Customer Service Hotline at +852 1833 823 or Toll Free Workbuide at +800 3822 3822 or by email to csroaming@btaretvigstor.com

### **Frequently Asked Questions:**

1. Don't see any signal name in the Wi-Fi signal list

There might not be any **supported** Wi-Fi hotspot near by. Note Wi-Fi signal from private access point will NOT be shown in the signal list, hence, it cannot be used.

2. Never able to establish a dialup connection

Check out whether:

- your PC has modem installed or
- a correct modem is selected (click the Advanced button and select the correct one under the Hardware Device drop-down selection box)

### **Change Password**

Follow the procedure below to change your password:

- Start a web browser, and type in <u>www.biz.netvigator.com</u> in the browser's address bar
- Login to the Service Portal from the Customer Login at the top right corner
  - Type in your assigned username, e.g. <u>pccwrm50@biznetvigator.com</u> at the User Name prompt. Note, the domain @biznetvigator.com must be input
  - Type in your current password
- Once login successfully, the Service Portal will be shown
- Click the "Change Password" from the left-hand side menu
- Type in your current password at the Old Password prompt
- Type in your new password at the New Password prompt
- Re-type the new password at the Confirm Password prompt
- Click the Submit button Done
